- When not in use, the components should be stored in the carrying case and in a cool, dry place.

 - Sprayed or wiped with common household cleaners such as Formula 409®, Windex® or Vim®.

The face may also be sanitized with alcohol, Clorox® or Lysol® wipes. Between student uses (and prior to applying the face shield), the instructor (or student) may clean the faces with a sanitizing wipe as an extra measure of protection.

Students may be provided with an individual face shield (sold separately) which may be placed over the Face-Shield/Lung-Bag. This allows multiple students to use one Face-Shield/Lung-Bag during a session.

TROUBLESHOOTING:

- If you cannot get the chest to rise when you blow into the face shield lung bag:
 - Check to make sure that the head is tilted back to create an open airway.
 - Check the lung bag itself. Ensure that it is properly positioned over the compression plate, not twisted and is lying flat.
 - Check the face shield. Ensure that it is attached to the 'buttons' on the side of the manikin head and that it is flat against the face of the manikin.
 - Check the bag to insure that has not been torn by testing inflation outside of the manikin.
- If the chest does not compress and/or it seems the piston is binding:
 - Ensure proper hand placement - check horizontal hand placement and adjust to center in between the nipples.
